### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert Epstein on February 3, 2006.

The application has been amended as follows:

In Claim 4, line 21, replaced "comprising a cam surface." with --comprising a cam surface, where said locking means is axially offset from said latch rotation preventing member.--

In Claim 13, line 17, replaced "said housing, further comprising" with --said housing, wherein said key actuated lock cylinder is axially offset from said member, further comprising--.

### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: The claims are allowable over the prior art of record because the teachings of the references taken as a whole do not teach or render obvious the combination set forth, including that of a lock for a vehicle door having a housing, a latch means comprising a hook, a latch prevention member linearly moveable relative to the housing, in a direction substantially parallel to the axis of rotation of the latch means, and intersecting the path of the latch means, means for biasing, and locking means having a key actuated lock cylinder, the locking means having a linkage part connected to the

Art Unit: 3676

lock cylinder for movement and having a cam surface thereon, where the locking means is offset from the latch rotation preventing member.

The closest prior art of record, U.S. Patent Number 3,270,536 to Sprung, discloses a lock for having a housing, a latch means comprising a hook, a latch prevention member linearly moveable relative to the housing, in a direction substantially parallel to the axis of rotation of the latch means, and intersecting the path of the latch means, and locking means having a key actuated lock cylinder. However, Sprung does not disclose a biasing means or the locking means having a linkage part connected to the lock cylinder for movement and having a cam surface thereon, where the locking means is offset from the latch rotation preventing member.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are cited to further show the state of the art with respect to axially moveable locking means:

U.S. Patent Number 6,178,789 to Finkelstein et al., U.S. Patent Number 4,380,915 to Kincaid et al., U.S. Patent Application Publication 2003/0200777 to Waschgler, British Patent Number 2,182,706 to Fairless.
